## Education

From July 2011  
To June 2015

### Bachelor of Engineering (B.E.)

- I did my bachelor's degree from "Datta Meghe College of Engineering, Airoli".
- My academic score was 72% (GPA 3.3)
- My major in Mechanical landing got me campus placed at "CYBERMARINE"

## Work Exp.

From Sep 2015  
To present

### CADSOL SERVICES as a **Lead Developer** - 2 years 10 months

- My responsibility is to develop the whole architecture for the execution of each project.
- My job is to focus on front-end, back-end and all database need as per each project.
- Train colleagues to make them capable of executing the project.

From July 15  
To May 16

### CYBERMARINE as an **Associate Engineer** - 8 months

- My responsibility was to design and review technical documents of the machinery of vessels.

## Major Projects

From May 2019  
To present

### **BioApz** an app to provide a local business search for its users.

- My responsibility is to develop and manage the whole application.
- I was responsible to coordinate with the Designer for app design.
- I was responsible to choose the backend and database stack for optimum performance and optimum security.
- I was alone responsible to build the whole application from scratch.
- Complexity: One app 3 role makes it complex  
Customer, Business and SalesPerson role
- Special Functionality: 1. GMaps for showing nearby business to users  
2. Users Authentication and database access as per role  
3. Multiple Dynamic Template for showing diff. business
- Stack used in this project is as follows.

React Native  
(Hybrid App)

Firebase Auth  
(User Auth)

Firebase Firestore  
(NoSQL DB)

Firebase Function  
(Back End)

From Mar 2019  
To May 2019

**Panel Configurator** a web-app for custom configuration of Server Panels

- My responsibility was to build the whole dynamic web-app from scratch.
- I was responsible to implement the UI and UX given by designer at best.
- Complexity: 1. Drag and Drop of panel compartment and the panel itself.  
2. Mapping the rules & checks of placement logic in the application.
- Stack used in this project is as follows.

Angular 6 (Web App)	Firebase Auth (User Auth)	Firebase Firestore (NoSQL DB)	Angular Material (UI/UX)	Heroku (Server)
------------------------	------------------------------	----------------------------------	-----------------------------	--------------------

From Oct 2018  
To Feb 2019

**Airpix** a media annotation webapp used to showcase to the end-user

- My responsibility was to gather the necessary information from the client.
- I was responsible to coordinate with the designer to get the design done.
- I was responsible to choose storage space for hosting GigaBytes of Media.
- I was alone responsible to build the whole web-app from scratch.
- I built custom text annotation and rectangular box annotation feature.
- Complexity: 1. App demand custom templated forms like Google Forms  
2. Overlay annotation on top of videos and animating it.
- Stack used in this project is as follows.

Angular 6 (Web App)	Node JS (Back End)	Firebase Firestore (NoSQL DB)	P5.JS (GUI overlay)	Google Cloud Storage
------------------------	-----------------------	----------------------------------	------------------------	-------------------------

From Jan 2019  
To July 2019

**Tongo** a Native Ecommerce Android App

- App provides businesses to register their products and services in the app itself.
- My responsibility was to manage the client and take all inputs.
- I was responsible to coordinate with the designer to get the design done.
- I was responsible to choose backend, database, and API structure.
- I was responsible to build the Android App and Super Admin Dashboard website.
- Complexity: 1. Managing multiple roles of each business like Admin, Manager & Delivery Person  
2. Managing chat between user and business team like a group chat.  
3. Calculating delivery charges based on travel distance for the delivery person.
- Stack used in this project is as follows.

Android Studio (Kotlin)	NodeJS (Back End)	GraphQL (API)	MySQL (Database)	Geo Fencing (Location tracking)
----------------------------	----------------------	------------------	---------------------	------------------------------------

From Jan 2018  
To Feb 2019

**EMRP** an NGO website (emrpfoundation.org)

- I was responsible to build the full website as a charity.
- Pure HTML/CSS template was used and modified as per need.
- Complexity: Paytm Enterprise Integration made in this website.

HTML (UI)	CSS (UI)	PHP (backend)	Java Script	Payment Gateway (Paytm)
--------------	-------------	------------------	-------------	----------------------------
