The one person missing from your team

Name: **Bishal Ramesh Biswas**
Address: O.T. section Hanuman Colony B.K.no-1092. Ulhasnagar-421003.
Contact No: **+91 - 9029 789 313**
Email ID: **biswasbishal93@gmail.com**
Country: **India, Maharashtra**

Introduction

Instead of listing out my abilities, I will follow a **unconventional** way of expressing one story that explains it all.

The Beginning

After completing my **Bachelor's degree in Engineering** major in **Mechanical** from "Datta Meghe College of Engineering, Airoli" in *March 2015*. My academic score of **72% (GPA 3.3)** placed me at "Cybermarine" , a marine vessel design firm.

The Twist

Lack of practicality in Mechanical field drifted my focus away from this field, and being a **decision-maker** I decided to resign from Cybermarine in March,2016.

New Start

In *September 2016* I joined my current company "**CADSOL**" as an Associate Engineer, I worked there for **2 years 10 months** till July 2019, at CADSOL we provide design automation tools to our clients in manufacturing segment, clients like Parle Elizabeth, L&T Heavy Engg, SUNESONS, Formertron. My job was to focus on **UI/UX development**. We used:

Angular 2	C# (CAD API)	Express JS (for server)

New Startup

Aside from CADSOL, I was part-time working on my partner's startup, **myTaxpert** (an online platform for all your financial needs) started in January 2017 and completed the project within **3 months** of time. I learned fullstack web development from this project.

HTML	CSS	PHP	MySQL

Improvise

Impressed with my abilities, CADSOL started bringing in some complex projects for me to tackle, e.g., "Jagruti App" which needed to be built on React Native, and a heavy data flow web app like "Airpix" built on Angular 4. Because of these projects I became **proficeint in following technologies**.

Node JS	React Native	GraphQL	Angular 4	Ubuntu (bash)

Build a Project from scratch

Soon I got my first private project "**Tongo**" to execute from scratch on June 2018 from a client named "**PotDrum Digital**".
Me and my team executed this project within **3 months**.
Tongo - Buy and Sell Locally is a platform which gives user the power to sell instantly and/or purchase goods and services from the comfort of their location.
I utilised this opportuinity to achieve proficiency in:

Building an End to End platform from scratch.	Android JetPack & Android Development.

Firebase Firestore	Firebase Storage	Firebase Functions	Firebase Authentication

Helping NGO

Build website for an NGO named "EMRP" to help them raise fund.
Did ENTERPRISE PAYTM integration for the site https://emrpfoundation.org/

Dynamic Web on Vanilla JS

CADSOL automation project needed dynamic forms UI which are custom build.
So I executed project like "Partition Configurator" using Vanilla JS and Jquery.

Sharing

One of the major responsibility I has in CADSOL is teaching all other team members and making them upto mark for developemnt.

Interactive webapp

Build an Interactive webapp for Sunesons for their product Panel Configurator.
It was demonstrated in an Industrial exhibition in Dubai.

Journey until now

I joined **CADSOL** and worked as a full stack developer there for **2 years 10 months**. I have a hands on experience managing team while doing part time projects for my private clients. My natural ability of learning fast to get to pace of my surronding make me perfect for the job.

Conclusion

Why hire me?
My adaptive capabilities will help the team to migrate to new and updated technology which in turn will make the life of clients and team members much simpler. My experience of around 3 year's demonstrated the same.
